

LIMERICK CITY AND COUNTY COUNCIL

MEETING OF THE MUNICIPAL DISTRICT OF CAPPAMORE- KILMALLOCK TO BE HELD ON THURSDAY, 19TH APRIL, 2018.

Notice of Motion submitted by Councillor G. Mitchell

I will move at the next meeting that an Overseer investigate blocked gulleys, shores, manholes and potholes and disrepair, along with any other risks, including trees and litter, which may be a danger to traffic and all road users, along with mapping of all future and past gulleys, culverts and shores; this work to be carried out on an ongoing basis so as to notify and alert the Local Authority and the Elected Members of any impending danger.

REPLY:

Routine roads maintenance in the Municipal District of Cappamore-Kilmallock is divided into two operational areas - Operations North, based in the Annacotty Depot, and Operations South, based in Kilmallock. Each operational area has a Roads Engineer who is responsible for the maintenance of the road network, including the investigation and resolution of blocked gullies, repair of potholes and other roads-related problems. The Roads Engineers are also assisted by 4 Roads Supervisors in investigating and resolving routine drainage problems and repair of potholes.

The Sugar CRM system is increasingly being used by Elected Members and the public to report potholes and blocked gullies and the Sugar CRM system provides a mechanism for updating the Elected Members and public of progress in resolving roads-related problems. All of the information garnered from the various sources are then used to assist in the response to issues arising and in the preparation of a planned roads programme for the Municipal District.

***Barry Murphy,
A/Senior Executive Engineer
Kilmallock.***

19th April, 2018.
